

Congratulations! You are entering adulthood! It has been our honor to take care of you and watch you grow into the young adult you are today. Desert Shores Pediatrics wants to help you and your family make a smooth transition from pediatric to adult health care. This will be a major shift from a pediatric care model where parents make most health choices to an adult care model where you make your own health choices. We will continue to provide medical care until you have turned 18 years old and graduated from high school. Please make sure you have scheduled your annual physical and are up-to-date on recommended vaccinations including Tdap, Menactra, Trumenba, and Gardasil.

We have enclosed a list of local primary care physicians for your convenience. We do not endorse any specific practice but wanted to give you a starting point for reference. When you establish care at the new practice, we will gladly transfer your records when we receive a signed medical release from their office.

We respect that many of our young adult patients choose to continue to involve their families in health care decisions. Only with your consent will we be able to discuss any personal health information with family members. Additionally, online portal access will be restricted to only your own personal email account. If you currently do not have portal access and desire it, please contact our office.

As you continue your path to adulthood, we hope you follow your passions, reach for the stars, and stay healthy! You are our future!

Sincerely,

Desert Shores Pediatrics
